

Jarrian McLean

New York, NY | 917-817-1471 | jarrian.mclean@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SKILLS

Languages: JavaScript, Python, Ruby, Java, SQL

Frameworks: React, Vue.js, Node.js, Ruby on Rails, Django

Infrastructure: GCP, Docker, Kafka, Terraform, AWS

Data: PostgreSQL, MongoDB, MySQL

Tools: Git, Postman, Honeybadger, Bash, Cypress, Playwright

EXPERIENCE

Optoro

Nov 2021 - Mar 2025

Software Engineer

- Cut deployment time by 67% by designing and automating CI/CD pipelines using GCP Cloud Build and Terraform, connecting GitLab triggers to Cloud Run deployments, and standardizing infrastructure-as-code across multiple applications.
- Processed 1M+ daily orders by extending and maintaining REST API integrations across carrier, warehouse, and retailer systems in Ruby on Rails, ensuring reliable data routing and logging for downstream microservice consumption.
- Eliminated manual error handling across distributed microservices by building an automated exception-capture pipeline in Python and Django, publishing to GCP and Kafka, and improving observability across services. The approach was designed collaboratively through agile sprint planning with tradeoffs evaluated as a team.
- Led front-end design for a home pickup scheduling feature, enabling users to book third-party courier pickups with date and time selection for drop-off at FedEx and UPS locations, integrating courier APIs end to end.
- Built Vue.js features for the returns platform serving enterprise clients, including Gap, IKEA, and LL Bean, including label generation and exchange options, wrote Vitest coverage for component testing, and collaborated with QA on Cypress end-to-end automation, accelerating release cycles.
- Integrated Google Maps API for nearest return location lookup across 2,000+ retail locations, navigating a Google ToS constraint around coordinate caching that required redesigning the data-fetching approach to maintain accuracy while staying compliant.

Broadcast

Dec 2020 - Apr 2021

Full-Stack Engineer (Contract)

- Built full-stack marketing and user-research applications using JavaScript, Node, MongoDB, and SendGrid API, enabling businesses to engage 30K+ customers annually.
- Deployed React applications with OAuth authentication for 500+ B2C users and Stripe API for payment processing, facilitating 1,000+ transactions per quarter.
- Engineered a network-testing service with Express and MySQL, using the Navigator API to capture connectivity data across 600+ clients and 3,700+ devices.

Building Noble Solutions UEP

Jun 2019 - Sep 2020

Full-Stack Engineer (Contract)

- Enabled password-less MFA across 196K+ client devices by deploying HYPR enterprise authentication on GCP and AWS, reducing login friction by 3x.
- Increased user bookings by 35% by refactoring a React and Node application to MVC architecture, unlocking asynchronous appointment scheduling for a healthcare microservices platform.
- Empowered clients to surface insights from 16M+ rows of healthcare-provider data by delivering a SQL-based visualization interface, driving 3+ product iterations.

EDUCATION

Western Governors University

2025 - Present

Software Engineering – Bachelor of Science

Flatiron School

2019

Full-Stack Development

Hunter College

2011 - 2014

Linguistics
